2018 Executive Leadership Forum

On April 19 and 20, the National Centers of Academic Excellence in Cybersecurity, hosted by the University of Washington, Bothell, held its annual Executive Leadership Forum (ELF) in Bothell, Washington. The ELF brings together leaders from academia, industry, and government to discuss issues facing the cybersecurity workforce and education. This year the leadership forum focused on "discussion and information sharing, industry workforce needs, successful collaboration models, apprenticeship, and cooperative education programs," Lynne Clark, Chief of the CAE in Cyber Defense Program Management Office said.

During the morning session of the ELF, participants heard about the success of the Cin-Day Cyber Corridor, Innovative Partnerships and Solutions to Bridge Talent Needs, and the role of the Chief Information Security Officer and Chief Information Officer (CISO/CIO) in academia and state government. These discussions focused on initiatives that help make students successful beyond the classroom as well as methods to recruit and retain qualified cyber talent. Several of the discussions focused on the soft and hard skills students need to be successful upon graduation.
