The Rose State College Cybersecurity Program prepares students for careers in Cybersecurity, Digital Forensics, and Information Technology. Starting in 2003, the college developed specialized programs that are combined with quality instruction to equip students to become leaders in the industry. Rose State offers degree paths in the areas of cybersecurity, digital forensics and incident response along with certificates in cyber essentials, cybersecurity, and digital forensics.

Upon completion, degree recipients will also be prepared for many other industry certifications. The Cybersecurity Program allows students to choose the way they would like to learn and take classes. The class modalities include in-person instruction, online learning, and “Flex” courses known for offering a mixture of in-person and online course availability to suit a busy schedule.

The Cybersecurity Program prepares students to enter the workforce or transfer to a university where they can continue their education. Rose State has articulation agreements allowing a smooth transfer process with several surrounding universities including Oklahoma State University Institute of Technology, University of Oklahoma, University of Central Oklahoma and University of Tulsa. With more articulation agreements being added and more opportunities for advancement, Rose State is the perfect place to start for cybersecurity studies.

As an open and public admission program, Rose State's Cybersecurity Program aligns with the overall college mission and is dedicated to providing students with the support and instruction needed to succeed. The Cybersecurity Program is more than just a stepping stone for students, it’s a springboard for success with experienced staff and faculty who care.
