STRATEGIES FOR BUILDING COMPETENCIES IN YOUR CYBERSECURITY CLASSROOM

Previous participants said:

"I think I got a whole notebook of Eureka moments!"

"This is very applicable and can be modified in a lot of different ways."

"We need to do a better job of teaching our students what they are learning!"

"I better understand what our students need to work on in order to be able to articulate their learning experiences to their employer."

Attendance includes:

- Return travel to Palm Desert, CA and two nights' accommodation;

- An additional $1000 stipend upon completion of training;

- An opportunity to lead future training with CAE community.

Competency in cybersecurity

Twenty educators at CAE accredited school will be invited to attend the second "Train the Trainer" workshop in Palm Desert, CA on **October 12th and 13th 2023** to address strategies for building students' competencies and employability.

This professional development opportunity will provide ways to build competency experiences into existing curricula, to design new classes and activities, and to access a wide range of available resources. Participants will take a lead role in raising awareness of how to develop and evidence student competency in cybersecurity within their institutions and across their professional networks.

After the training, participants will be expected to drive forward a commitment to building competencies across the CAE community.
